

Fast Recovery, Healthy Returns

In the fast-paced electronics market, every second counts. Speed and yield in all things production drive efficiency and profitability. This is true not only for movement of PCBs down the line, but also for MSD parts storage; the more frequently you can access parts, the greater your returns. And, the less time MSDs spend out of specification means a longer component life.

That's why ECD pushed the conventional limits of dry storage technology with SmartDRY™ Intelligent Dry Storagebecause we know time is money and good inputs equal good outputs. With recovery in less than three minutes, SmartDRY is among the fastest dry cabinets on the market. What does this mean for you?

Relax....you can open the door. Retrieve critical moisture-sensitive components as many as 10 to 12 times per hour – more than twice the access of competitive dry cabinets.

Long live the MSD! Less time out of specification means a longer life for your parts.

Follow the rules. With super-fast recovery, enjoy confidence that you are in compliance with J-STD 033 and prove the same to your customers.

What are you waiting for? Your parts are screaming for SmartDRY!
