

Get Flux where You Want It!

Want to ensure PCB top side flux application is applied uniformly and in the proper pattern? ECD's Fluxometer makes it easy. Periodically evaluating the consistency of flux deposition for the wave soldering process leads to optimized flux use, reduced rework and a better, more reliable end product.

With Fluxometer, simply run the test pallet through the fluxer in the same way a PCB would be processed. Remove the test paper (available for water-based, acid and alcohol-based fluxes) and observe the flux for pattern and overall uniformity.

Raise the bar on spray fluxing maintenance and verification.
