# The Thermal Process Dynamic Duo

**Supreme thermal profiling and oven performance verification are at your fingertips with ECD's dynamic duo: SuperM.O.L.E.® Gold 2 and OvenRIDER® NL2+.**

Profile your thermal processes with the industry's most trusted name in thermal profiling technology. SuperM.O.L.E. Gold 2, with its six-channel capability and massive memory capacity, offers simple control, an intuitive patented OK test result indicator ("go" or "no-go") and 96-run storage capability for profile protection and convenient off-line downloads.

Plus, SuperM.O.L.E. Gold 2's auto pallet detection allows for seamless integration with OvenRIDER NL 2+, which is part two of this fabulous one-two thermal profiling and verification knock-out! Superior to a "golden board", OvenRIDER NL 2+ profiles the oven, not the PCB. Thermal and process sensors measure oven performance, providing data for trend analysis and corrective action if required.

This dynamic duo saves time, money and protects against yield losses. Bam!
