

## Wave Ridding made Easy

**Let's face it: 48 cubic feet is big! The largest of the SmartDRY Intelligent Dry Storage portfolio, the SmartDry SD-48F dry cabinet is perfect for high-volume manufacturing environments where J-STD compliant storage of MSDs on feeders and feeder cassettes is critical. But, getting to those parts with ease is essential.**

Even though it's summer, we're not talking about "Hang 10" kinds of waves. We're talking about that often-challenging wave soldering procedure; admittedly maybe not as thrilling but equally important – at least if you are a process engineer that wants high-yield products!

It's true: the wave soldering process can be one of the toughest automated soldering procedures to set up. That's why ECD developed WaveRIDER® NL 2. This device is hands down the most simple and effective tool for verification of the wave soldering process. WaveRIDER NL 2 measures numerous parameters and enables perfect repeatability. Pre-heat temperatures, conveyor speed, wave heights, contact times and parallelism are all measures and monitored. It's that simple.

Maybe with WaveRIDER NL 2, you'll have more time for those "Hang 10" kinds of waves!
