Get to those hard to reach places!

Let's face it: 48 cubic feet is big! The largest of the SmartDRY Intelligent Dry Storage portfolio, the SmartDry SD-48F dry cabinet is perfect for high-volume manufacturing environments where J-STD compliant storage of MSDs on feeders and feeder cassettes is critical. But, getting to those parts with ease is essential.

Not to worry. ECD has designed shelving options that are now available for the large capacity SmartDRY SD-48F. Both fixed and pull-out shelving systems – or a combination of both – can be specified, making parts storage neat and organized and access simple and fast. And, let's not forget, you still get all the amazing benefits of SmartDRY technology.

- **J-STD Performance** – SmartDRY SD-48F goes beyond standard compliance, delivering true J-STD performance.
- **Constant Parts Access** – Recovery in less than 5 minutes for frequent and compliant access to parts. Self-regulating drying technology allows assembly specialists to retrieve critical moisture-sensitive components from dry storage as many as 10 to 12 times per hour.
- **On-sight Status Indicator Lighting** – Intelligent lighting technology that informs engineers of SmartDRY's status on sight means no more guessing about cabinet readiness.
- **Industry 4.0 Readiness** – Full networking capability for data viewing from any internet–enabled device; tracks performance and events from one or many ECD SmartDRY storage cabinets. Data can be accessed 24/7.
- **Quality Construction** – Made in the USA by ECD and designed to be rugged, long-lasting and reliable.

Performance and convenience – in one amazing dry storage technology!
