## Features

“Process control” and “Traceability” can be established through daily manual soldering operation.

### Information to be collected by T36 series tip

The following information can be collected by memory chip in T36 series tip and saved in a computer through a soldering station.

- Tip shape
- Serial number
- Number of loads
- Total time of power supplied
- Load Sensitivity
- Type of solder alloy (Lead-Free / Lead)
- Count alarm

Optimization of soldering conditions is now possible based on a variety of information in daily soldering process collected by FN-1010.

### Connectable with N<sub>2</sub> soldering iron

To improve solder wettability and spreadability

## FN-1102 氮

## More Features

Automatic calibration/off-set can be completed once measurement result is sent through infrared.

Human error-free “tip temperature calibration” and “off-set” can be established through daily manual soldering process. Results of measurement/calibration/off-set can be recorded automatically.

Eliminate human error in manual recording of measurement result by using FG-100B

Human errors in manual recording process and time for recording can be eliminated by sending measurement result from FG-100B to FN-1010.

For further information of FG-100B, see P. 52.

## Visualize energy supplied during soldering

It is now possible to visualize invisible energy supplied from T36 series tip during soldering. And that makes it possible to control factors of soldering, which were impossible before.

## Features

### IH (induction heater) for excellent thermal efficiency. Ideal for the most challenging soldering jobs.

FX-100 features IH (induction heater) that continuously powers the soldering iron and maintains the set temperature by automatically detecting even minute drops in temperature, plus HAKKO's proprietary "Power Assist" function.

FX-100 achieves powerful thermal recovery even with fine-shaped tips.

It provides excellent thermal responsiveness that conventional IH and sensor feedback systems cannot offer.

### Boost function

To increase tip temperature by 5 to 10°C (depends on tip shape) for better working efficiency.

## Features of FX-889

### User-Friendly Design

#### ● Space-saving design

The reduced foot print is smaller than 2 of FX-888D and its iron holder. Efficient setup is available even on smaller workbench.

#### ● Power-saving design

Independent switches cut the power for each iron when not in use. Power-saving design minimizes standby electricity.

#### ● Superior operability

Four buttons were symmetrically placed at the both sides on the front panel. The two buttons on each side allow simple and intuitive operation.

A color band can be attached to the handle, and this makes it possible to see at a glance which side it is connected to. (2 pieces of color band are included as the standard accessories.)

#### ● Rich functions of iron holder

- Convenient pockets to stock soldering tips
- Three different ways for tip cleaning with provided cleaning tools
- Simple and easy cleaning of iron holder inside by removing holder base

## Effects of N<sub>2</sub> system

N<sub>2</sub> gas is heated inside soldering iron and is discharged from the tip end. It prevents soldering joint from oxidation and gives preheating effect to workpiece. As a result, solderability increases.

### Preventing oxidation

Heated N<sub>2</sub> gas reduces the oxidation of tips (iron plating). As a result, the wettability of tips is improved.

### Test criteria

After applying power for 3 hours with the temperature set at 400°C, feed solder and perform cleaning, and then compare the conditions.

### Preheating effect

Heated N<sub>2</sub> gas preheats the workpiece. As a result, even if the temperature setting is low, soldering can be finished in the same time as before.

### Test criteria

Board: Paper phenol copper board  
 Component: Connector  
 Solder: Lead-free solder (Sn-3Ag-0.5Cu)  $\phi$ 0.5mm  
 Tip shape: T12-D24 and T13-D24  
 Measurement method: Measure the time until the workpiece reached to 250°C at 5-points

- Compatible with no-clean soldering (low-activity flux)
- Solves the insufficient heat supply problems which may occur during soldering of multilayer boards
- Reduces cracking in multilayer ceramic capacitors by thermal stress
- Reduces soldering time
- Relieves loads applied to heat-sensitive parts
- Reduces tip oxidation

The use of N<sub>2</sub> gas improves workability, quality stability and reduces running cost.

### V-Groove Maker

- Cutting a V-groove put on the solder surface reduces the splash of solder and flux.
- The solder feed amount can be controlled by turning the switch on and off.
- Compact, space-saving automatic solder feeder

### Features

#### Minimize solder and flux splash

Cutting a V-groove on the solder surface enables the release of gas pressure generated by the flux, thereby suppressing splash. HAKKO 375 can cut a groove in only the solder needed, then helps to reduce the level of defectiveness.

#### Advantages of V-grooved solder

-Examination of solder and flux splash

#### Test criteria

## Features

### The new tube unit and guide pipe assembly for the best productivity

The combination of the new tube unit and the new guide pipe assembly makes it possible to obtain "Heat-Bridge Effect".  
The new optional parts are designed to feed solder from the underside of the tip. The one-handed soldering just like manual soldering can be achieved.

### What is a "Heat-Bridge" ?

It is the phenomenon that the heat from the tip being transferred quickly to soldering joint area via molten solder.

### Easy adjustment of the solder feeding position

The new tube unit makes it easy to adjust the solder feeding position by holding the guide pipe assembly tightly with the two parts.

For farther details, please scan here.

### Tip replacement without removing the tube unit

Tip can be replaced without removing the tube unit. It saves the trouble of adjusting the position of solder feeding.

### Easy maintenance

New guide pipe assembly will have less residue of flux fume and clogging with the residue while feeding solder from the underside of the tip.

#### Impact of flux fume: High

#### Impact of flux fume: Low

## Features

**For the daily maintenance of soldering station**  
Control of "tip temperature", "leak voltage", and "tip to ground resistance" is required for a grounded soldering station for electronic components.

### What is leak voltage and tip-to-ground resistance?

#### Leak voltage

Leak current is the current that leaks from the tip to a board or device. Leak voltage is a specific measurement of the level of this current. The leakage can adversely affect delicate devices, so it is necessary to check leak voltage on a daily basis.

#### Tip-to-ground resistance

Most leak current flows from the tip via the ground wire to the outlet ground terminal, and is prevented from affecting the device. Because of this, tip-to-ground resistance is another important issue that must be checked daily.

### Human error-free operation

#### 1. AUTO HOLD function

The measurement will end automatically when the displayed tip temperature is stabilized. Individual differences in temperature measurement can be minimized.

#### 2. Data send function (infrared)

## Common Features of FR-810B and FR-811

### New user friendly functions for SMD rework

#### Pickup indicator

The indication comes up and the moment of picking up will be visible.

#### Vacuum pickup function

This can avoid an error to peel off the land by removing components with excessive force.

#### New type of nozzles

The new nozzles improve work efficiency with uniform heating (only with BGA nozzles).

### Efficiency improvement

The high volume airflow and high output of FR-810B and FR-811 make it possible to perform the same work in only one-third of the time required when using a conventional model. This reduces the thermal impact on boards and components.

## Common Features of FR-810B and FR-811

### Auto sleep and auto shutoff features

To ensure safety and conserve power, when the handpiece is placed in the handpiece holder, the auto sleep function is activated and it starts cooling automatically.

If the handpiece has not been removed from the handpiece holder (example: using it in a rework fixture) and after it has been idle for 30 minutes, auto shutoff function is activated. It is automatically powered off.

Access to settings can be restricted via the password function for easy management.

Handpiece holder No.B5048 in the picture can be attached to FR-811 as well (option).

### Preset mode

	Preset 1	Preset 2	Preset 3	Preset 4	Preset 5
Temperature (°C)	250	300	350	400	450
Time (sec.)	100	80	50	120	150
Airflow (level)	6	7	8	4	5

### Chain presets function for making a simple thermal profile

The chain presets function is to make a simple thermal profile by combining several preset conditions (up to 5 steps).

\* Presets 4 and 5 have been set to "000", so they are skipped.

## Features of FR-811

Interface designed for intuitive operation. Possible to link to a PC.

Easy-to-read LCD

Easy-to-operate multi-direction control knob

A USB device terminal for easy data transfer

Link to a PC (A USB I/F terminal is available)

**The functions needed for SMD rework are in a compact body.**

**Possible to make full-scale thermal profiles with 6-zone hot air and a bottom heater**

A basic thermal profile is composed of the 5 parts shown below. FR-811 can provide 6 zones in which temperature, time, and airflow are controlled. Therefore FR-811 can make a full-scale thermal profile which is close to reflow profiles made by a reflow oven.

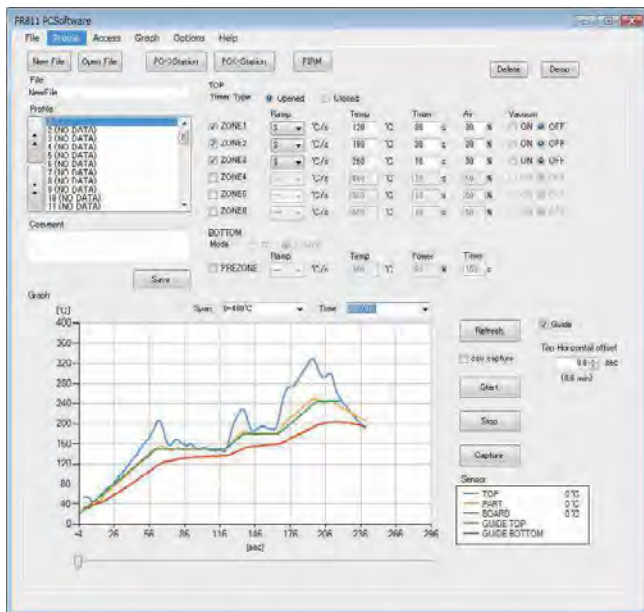

**Record thermal data**

By connecting a thermocouple included with FR-811, the temperature of the component or circuit board can be measured and recorded. In addition, if "TC LINK" is set, the heater output can be automatically controlled so that the temperature of the thermocouple attached to the component or circuit board follows the set profile.

**Operation on a PC for various settings**

By connecting FR-811 and a computer with a USB cable and using the dedicated software which comes as standard, a set thermal profile and actual temperature change can be shown in a graph in real time. The set values and graph can be saved in csv format.

**Linked operation with the bottom heater**

FR-811 can control on/off timing and output of the bottom heater which is available optionally.

### The dedicated bottom heater for FR-811

Equipped with carbon heaters. Heating area is divided into 2 sections.

### Board Holder

Makes it easy to set and remove a P.W.B. and to make fine adjustments after setting.

### Board Clip

Accepts even irregular-shaped P.W.B.

### Board Support Unit

Supports P.W.B. from underneath to minimize its warping.
