

## LEGS WITH WHEELS TO WORKSHOP TABLE

We are adding a new Workshop leg to our standard selection. So far we have had fixed leg and adjustable leg for the Workshop bench. Now we are introducing height adjustable leg with wheel mounting. Now also a heavy duty workshop bench can be modified into mobile workstation. Ergonomics are important also in workshop environment and that is why we have the possibility of height adjustment in this wheel version also.

Leg is designed to be used with wheels with flange fixing in order to get the best possible stability. We recommend using the Ø160 NEK-wheels from our own range.

Wheels can be fixed to the table in two ways:

1. All four swivel wheels with locks (more movability)
2. Two swivel wheels with locks and two fixed wheels (more directional stability)

Lower shelf can be used also with these new legs.

When using legs with wheels a spacer bar or fixing frame must be fixed between legs for more stability.

When using uprights and accessories in uprights it is necessary to pay attention to the position of the wheels, because the position can affect to the stability of the table.

Technical data (with our Ø160 NEK wheels):

- Height (without worktop) 785-1000mm (with fixing frame 900-1000mm)
- Loading capacity
  - 500kg (1000 ja 1500 wide tables)
  - 300kg (2000 ja 2250 wide tables)
- Mounting hole spacing for the wheel 80x105mm, Ø11mm
- Fixing screws for wheels are included

Item code and availability:

- 836029-49 Adjustable leg with wheel fixing, Workshop table
- Recommended wheels
  - 900040-00 Fixed wheel Ø160, NEK 160 LPPE-160 NEK
  - 900041-00 Swivel wheel with brake Ø160, NEK 160 LKE-J-160 NEK
- Available from factory on week 9
- Prices available from customer service
